

ASCHA

Distribution and Transmission Cost Review Service

Every customer pays distribution and transmission (D&T) costs for the supply of electricity and natural gas to its facilities. Although D&T costs are regulated, they have been steadily increasing in recent years, particularly for electricity, and now make up a significant portion of your energy bill, sometimes totaling over **60% of the final billing amount**.

It is important for members to understand the D&T billing components as there are **potential savings opportunities** within this expense line. Potential areas of review include:

- ✓ Rate classifications
- ✓ Billed/contracted demand levels
- ✓ Rate riders
- ✓ Metering irregularities
- ✓ Peak demand levels
- ✓ Efficiency of power usage

To help ASCHA members manage their D&T costs appropriately, our trusted energy management partner, **8760**, will provide a D&T cost review service upon request. Based on initial work that has been completed with some of our members, the potential cost savings could be significant.

Here is what our members are saying about this service:

“The ASCHA Distribution and Transmission review conducted by 8760 resulted in over \$24,000 annually in savings for future electricity distribution and transmission charges. Overall, the process was clearly identified and we received a professional and detailed report of the opportunities for 2 of our facilities. In addition, our employees did not have to be involved in the process as 8760 worked with the distribution company on our behalf. The ASCHA distribution and transmission review conducted by 8760 proved to be very worthwhile to our Foundation especially at a time where every dollar counts!”

Dena Krysik
Chief Administrative Officer
Lac Ste. Anne Foundation

ASCHA encourages all members to review this cost saving opportunity
